

My Best Complication

RECUPERO DI GUIDA FRATTURATA CON TECNICA TWISTING WIRE

Dott. Francesco Maria Ajmone; Dott. Andrea Bezzeccheri; Dott. Gianmarco Arturo Volpe
Ospedale San Carlo di Nancy Roma

Uomo
60 anni

Ipertensione arteriosa
Dislipidemia

Terapia medica: SAPT (A), sartano ,
statina

Angina da sforzo

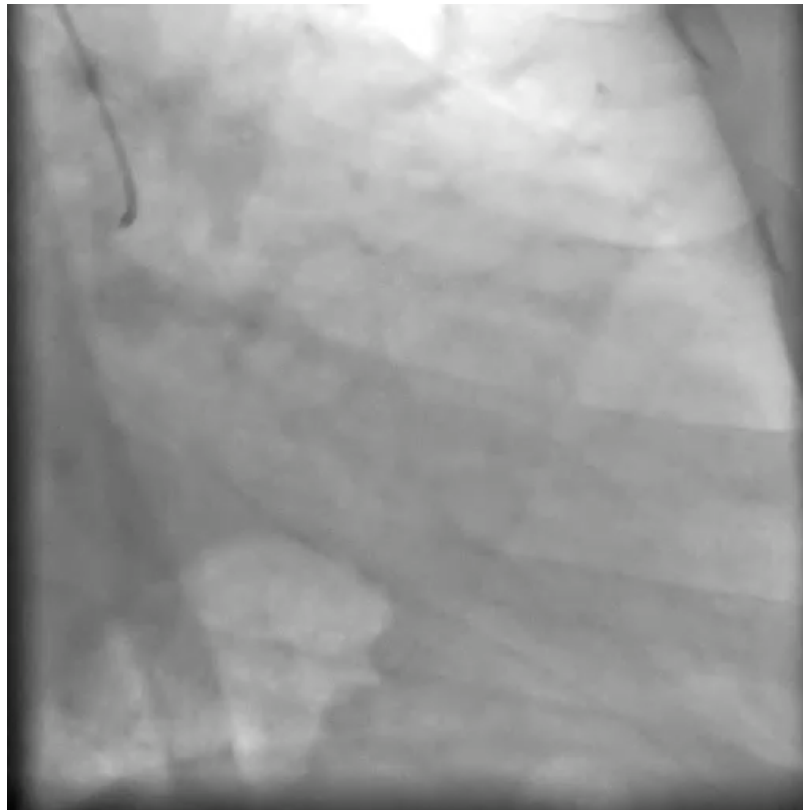

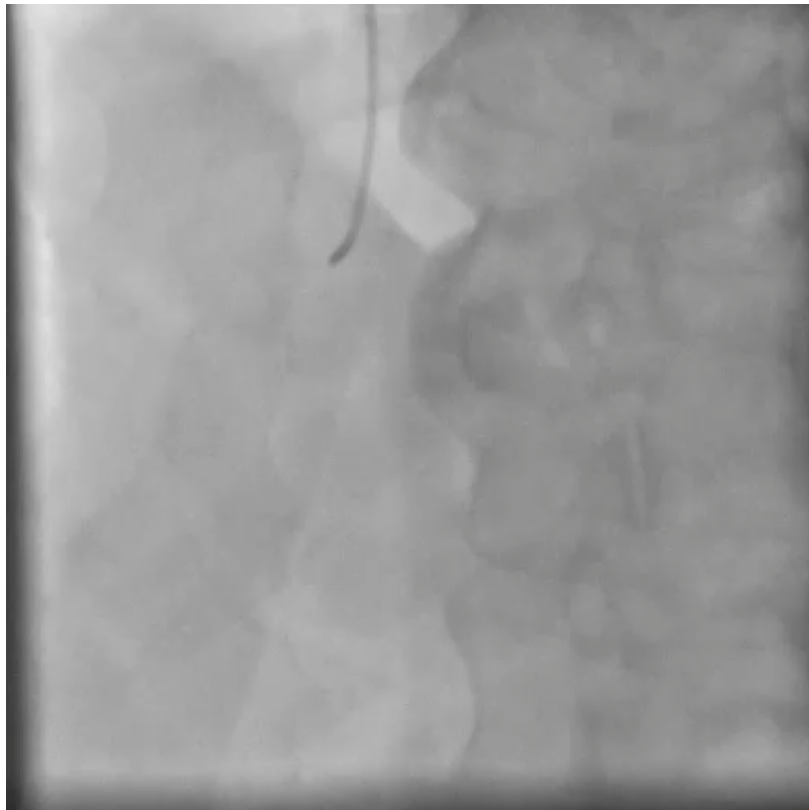

ETT: preservata funzione sistolica
biventricolare, non valvulopatie di
rilievo, ectasia aortica

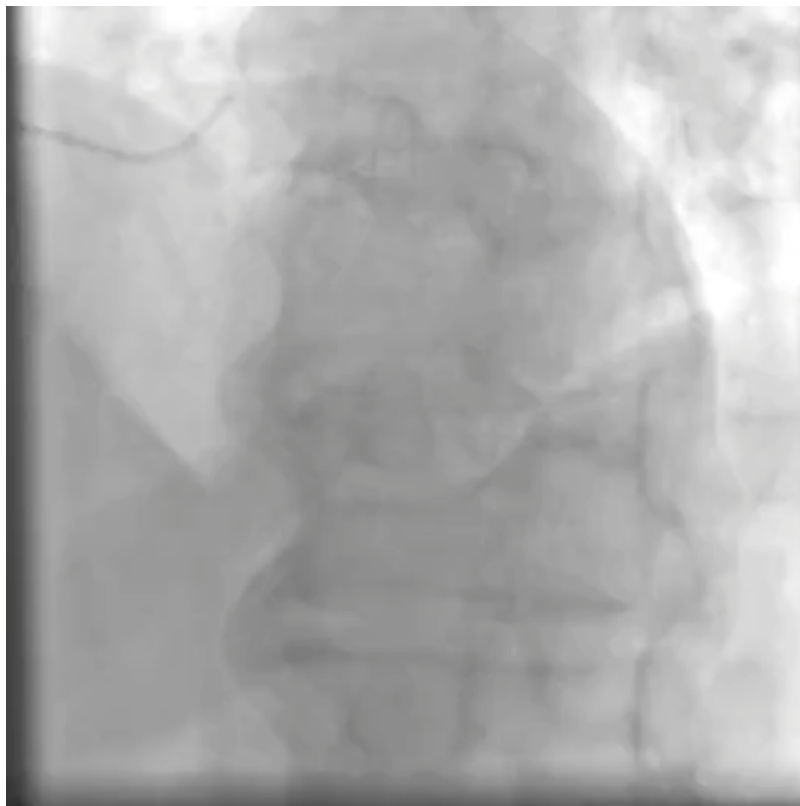

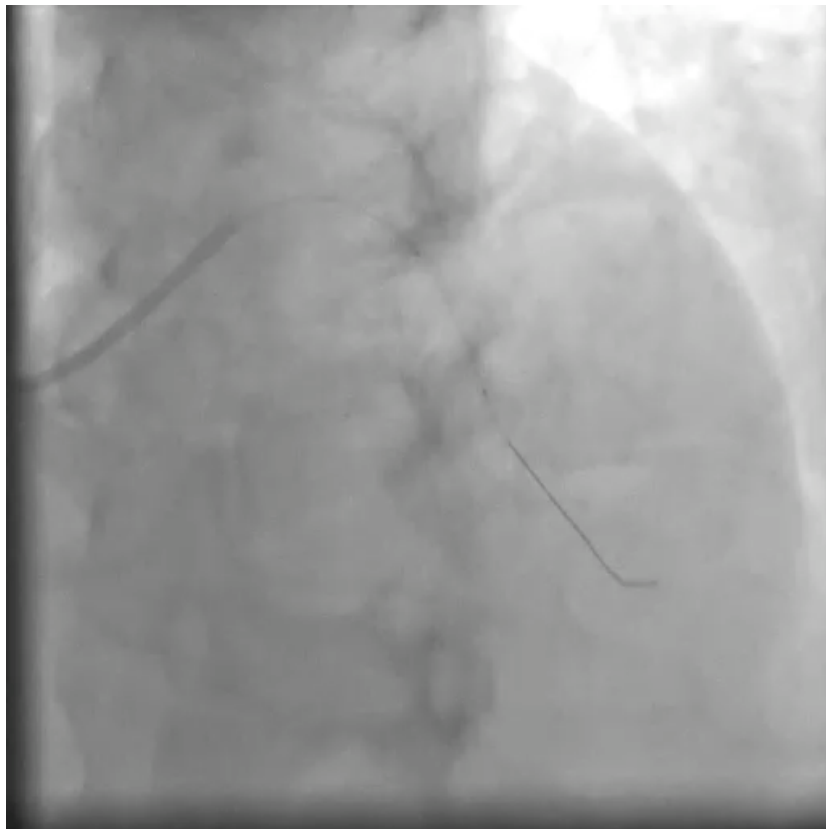

CardioTC: stenosi critica di arteria
interventricolare anteriore e I ramo
diagonale

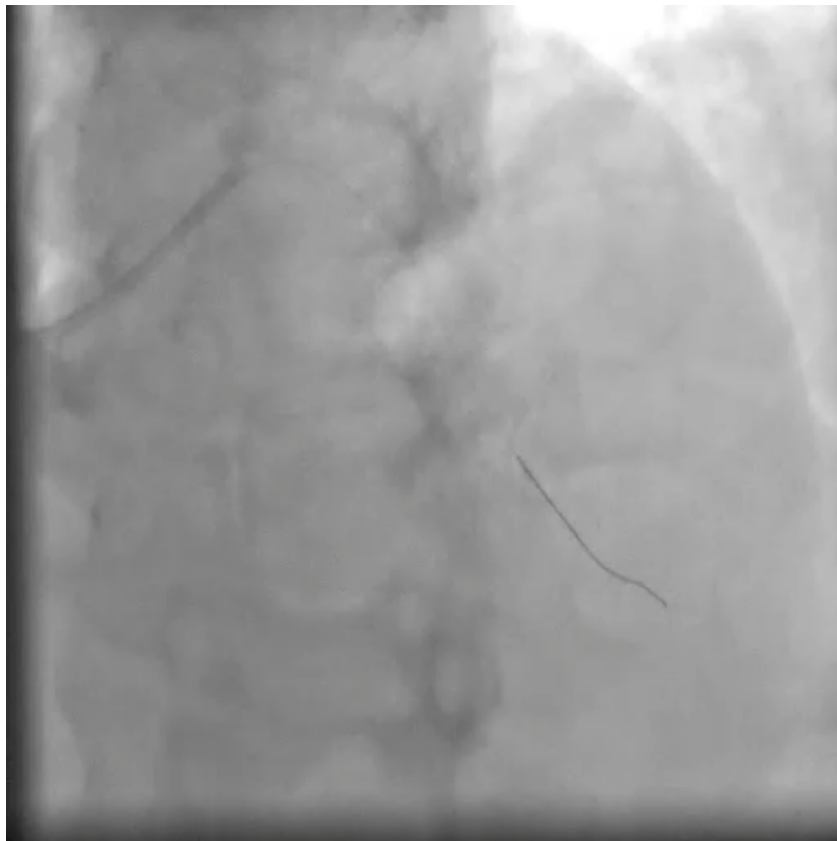

- Pre-dilatazione
- Pallone SC 2.5 mm

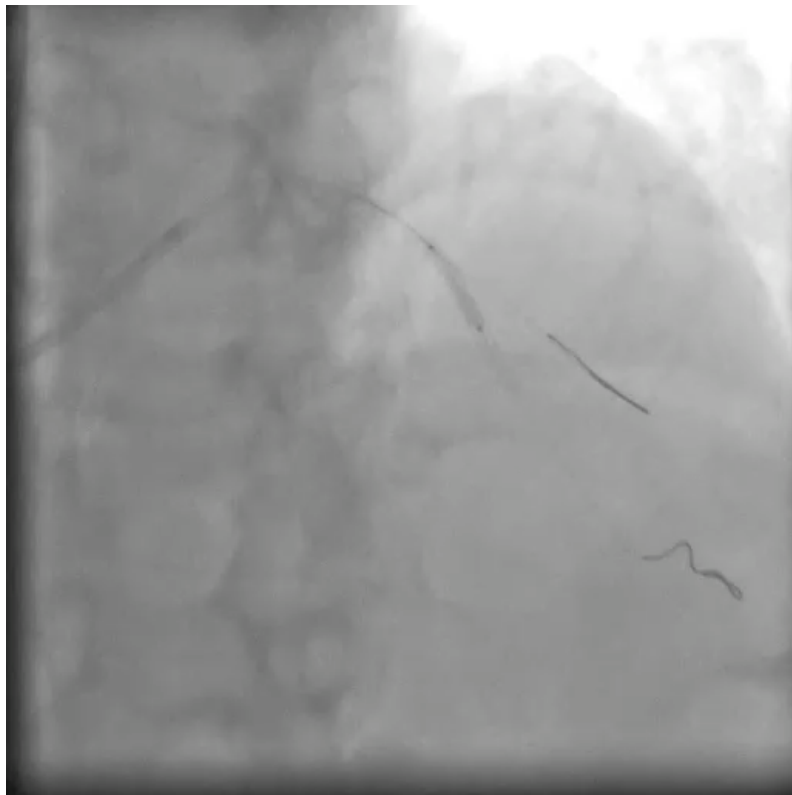

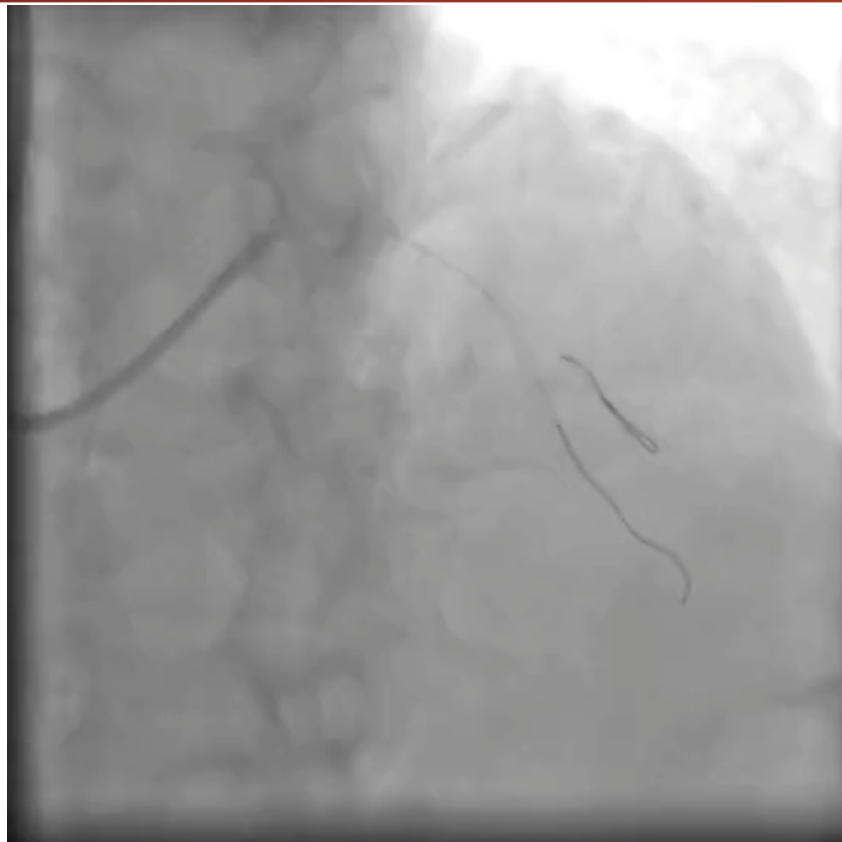

DES 2.5x28 mm

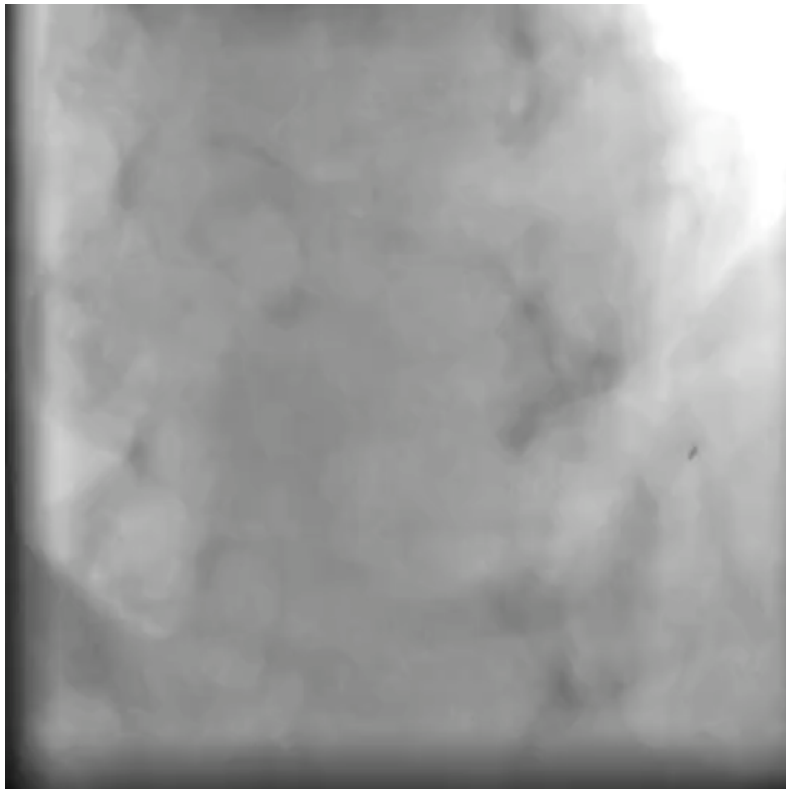

Post-dilatazione
Pallone NC 2.75 mm

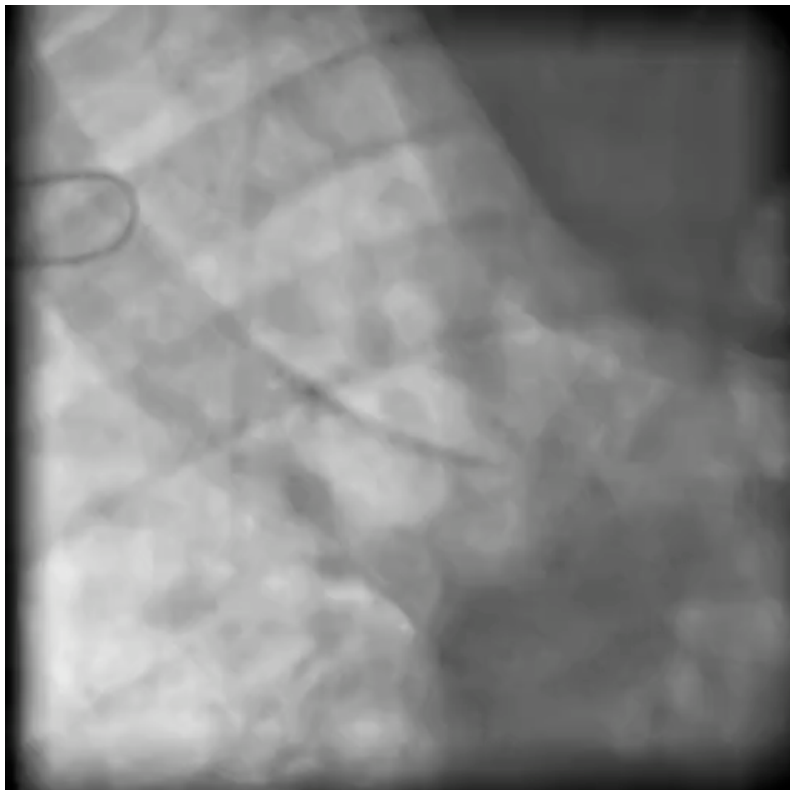

Angiografia finale

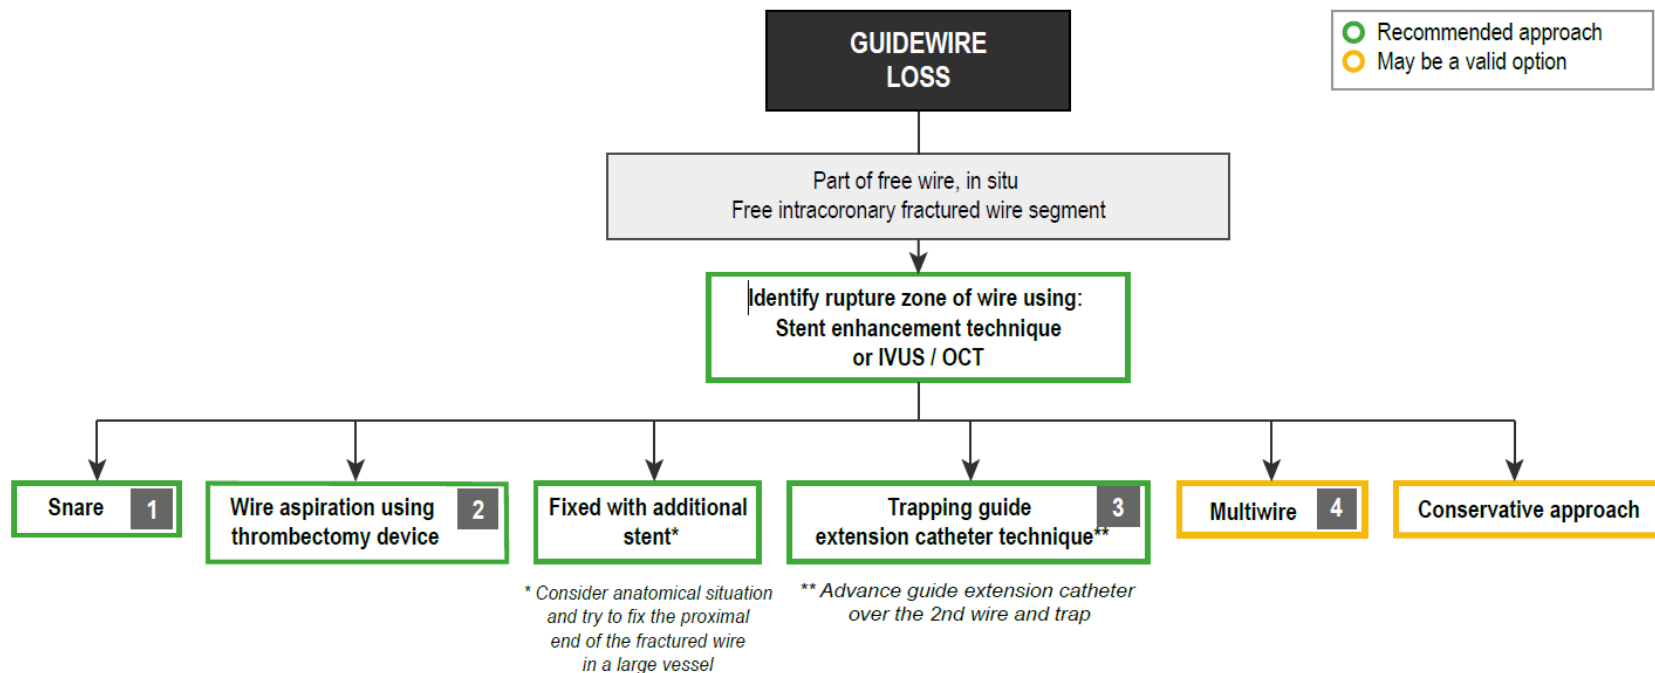

Entrapment della guida con frattura

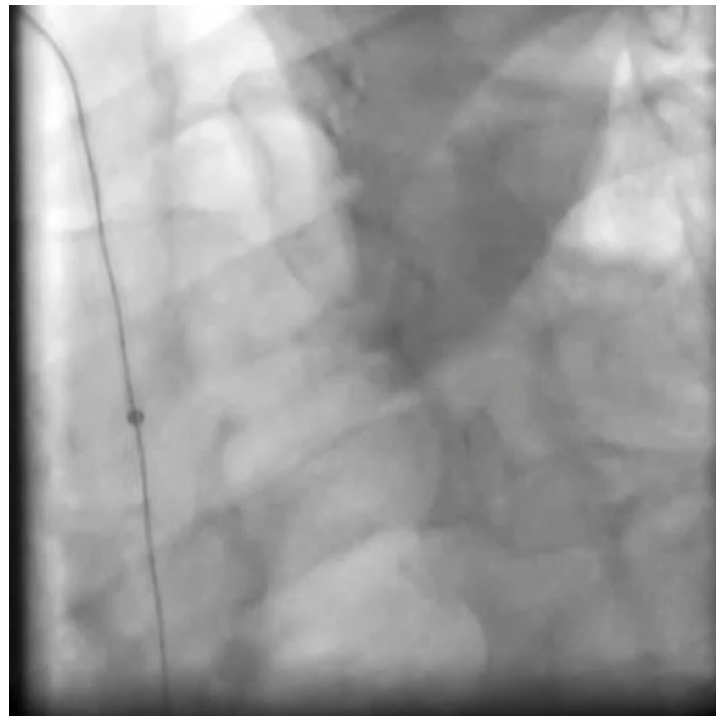

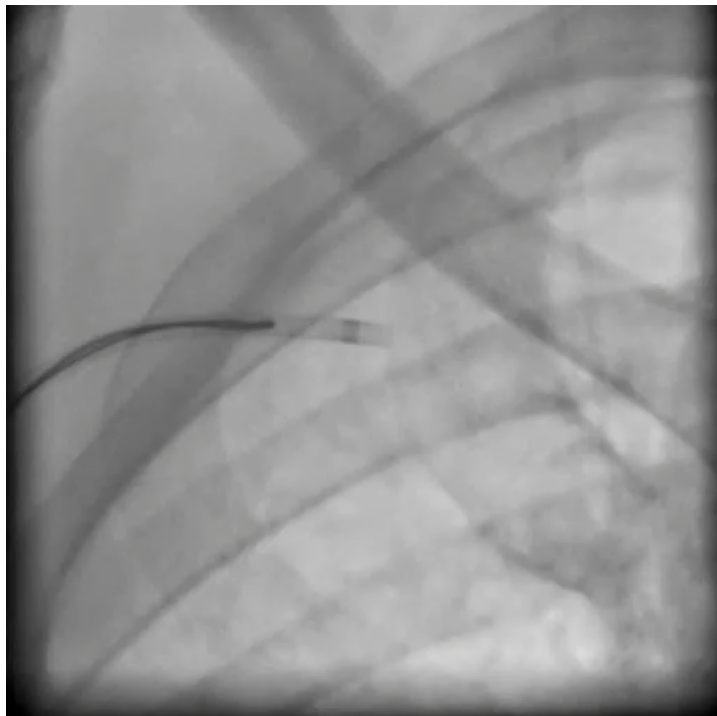

Entrapment della guida con frattura

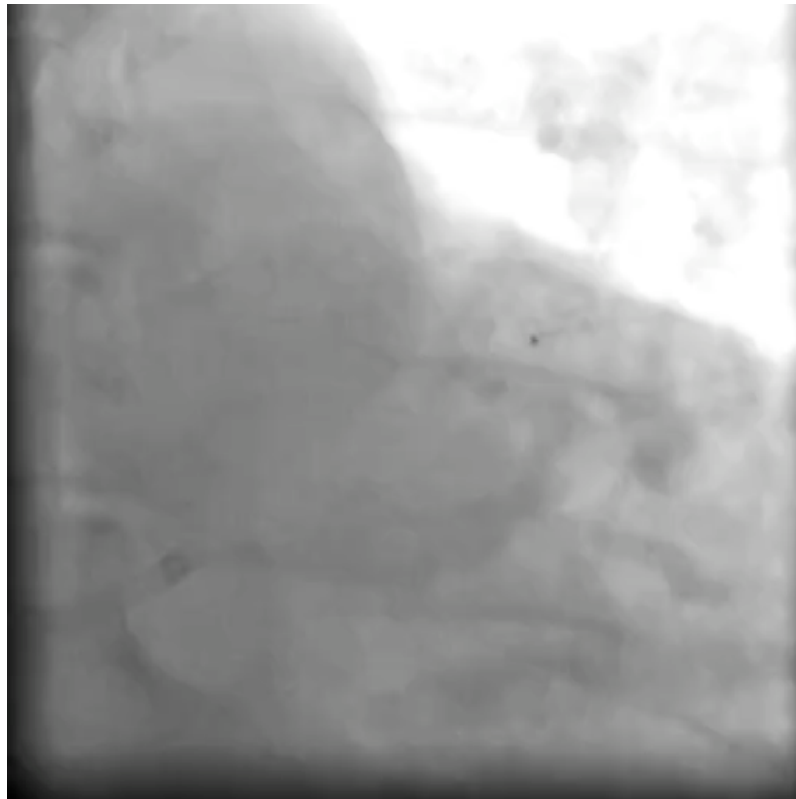

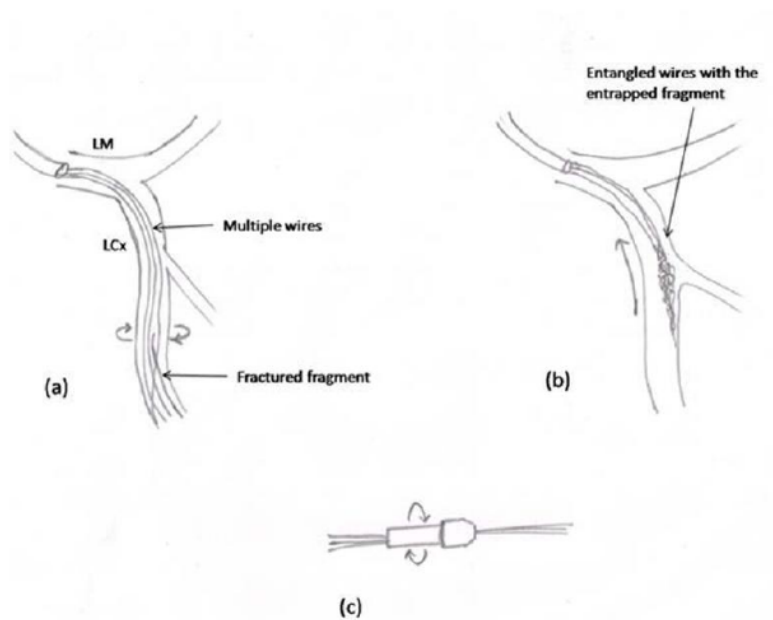

Tentativo di snaring

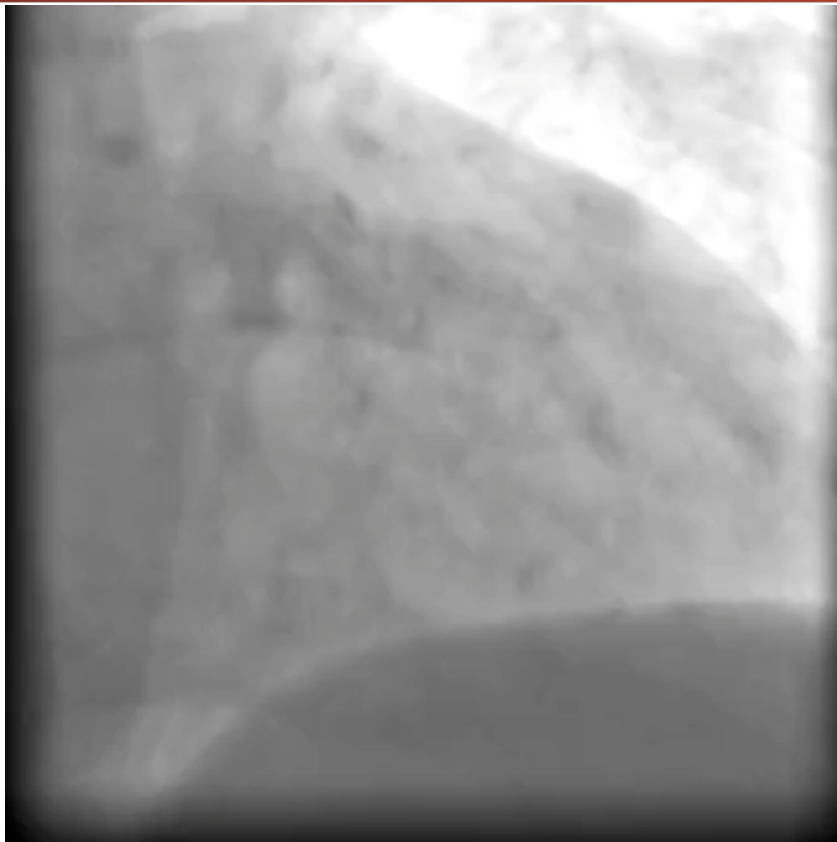

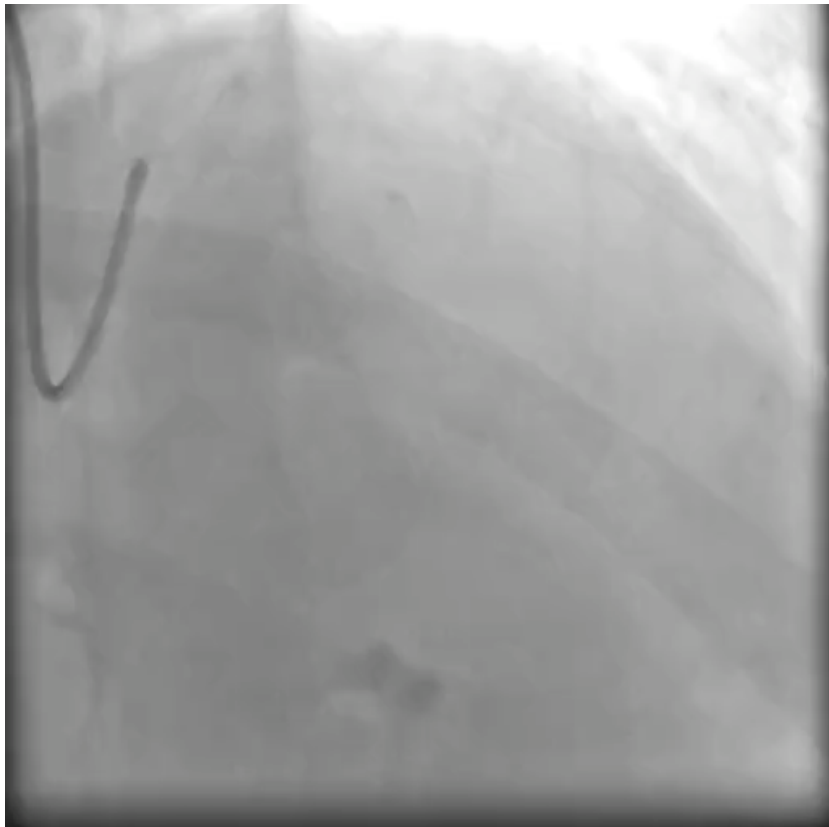

Recupero della
guida con utilizzo di
tecnica twisting
wire complicata da
completa avulsione
dello stent

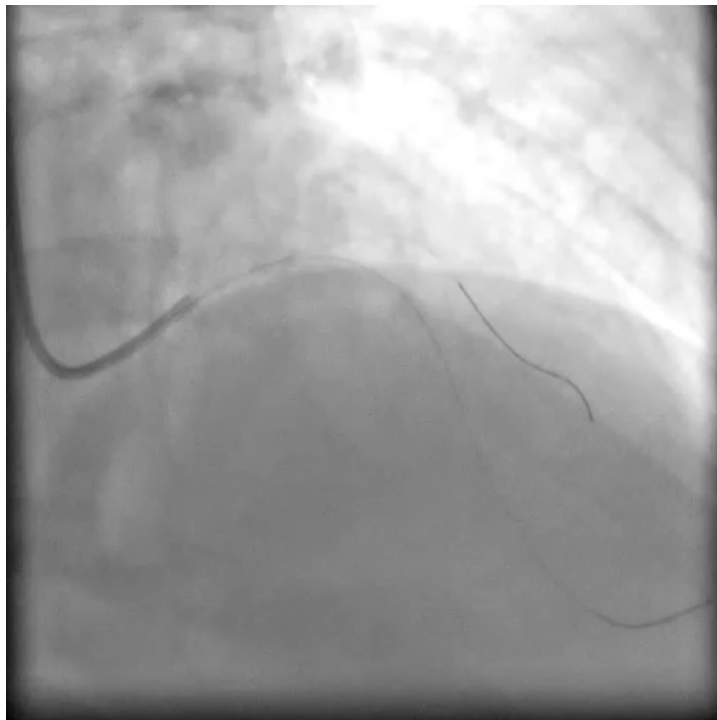

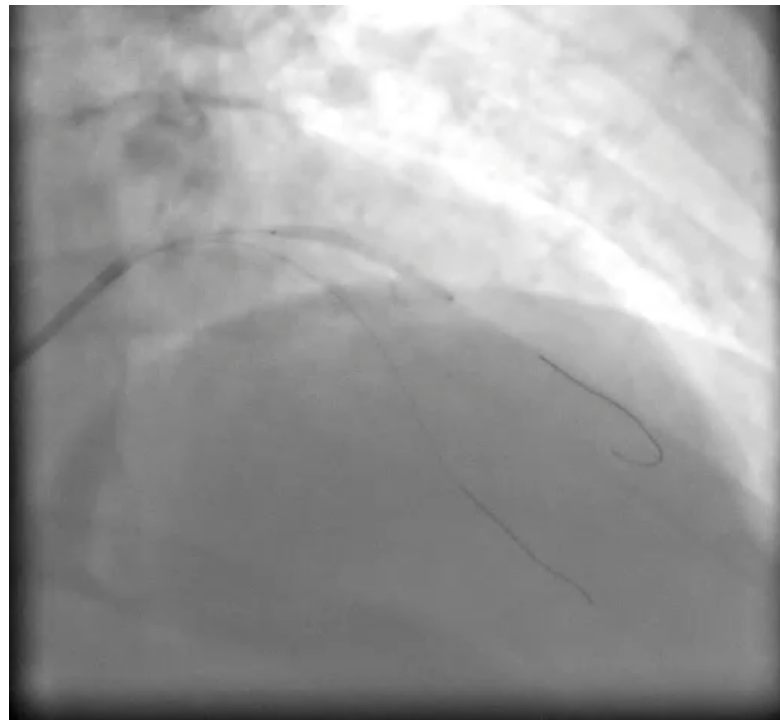

Dissezione
iatrogena di I ramo
diagonale ed arteria
interventricolare
anteriore prossimale

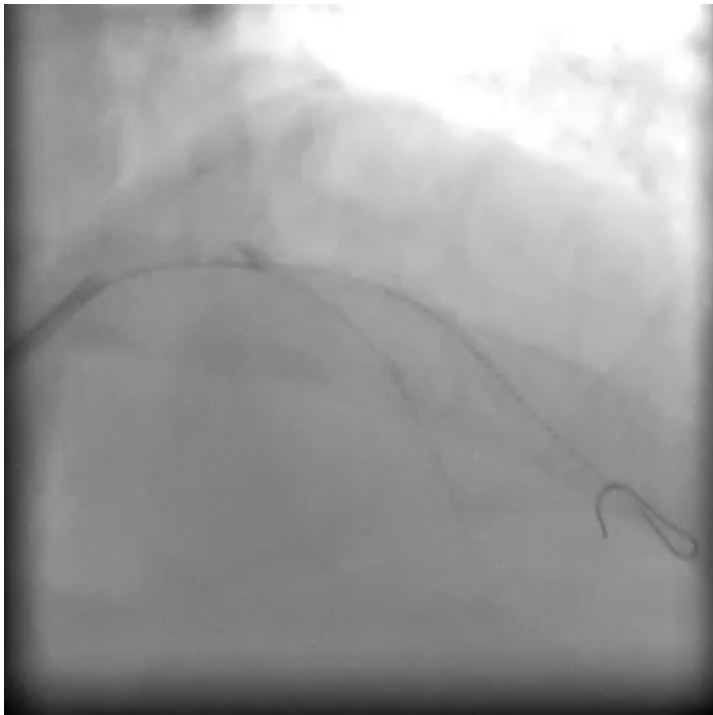

Wiring IVA-ID

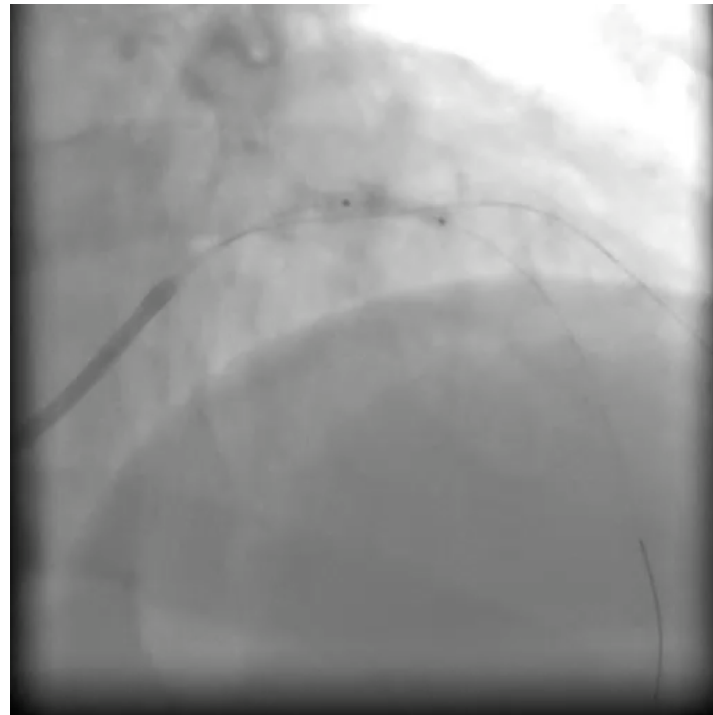

Pallone SC 2.5 mm su ID

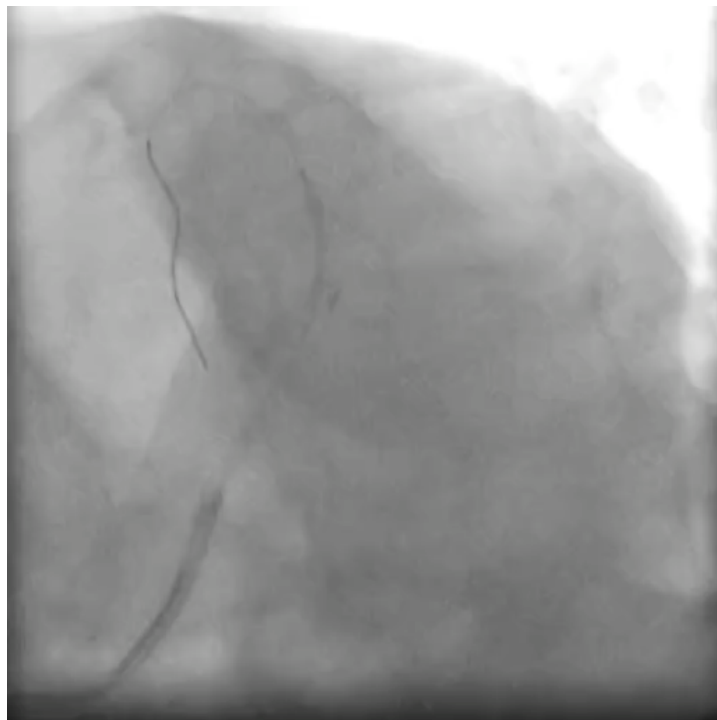

IRD ZES 2.5x30 mm

Crush

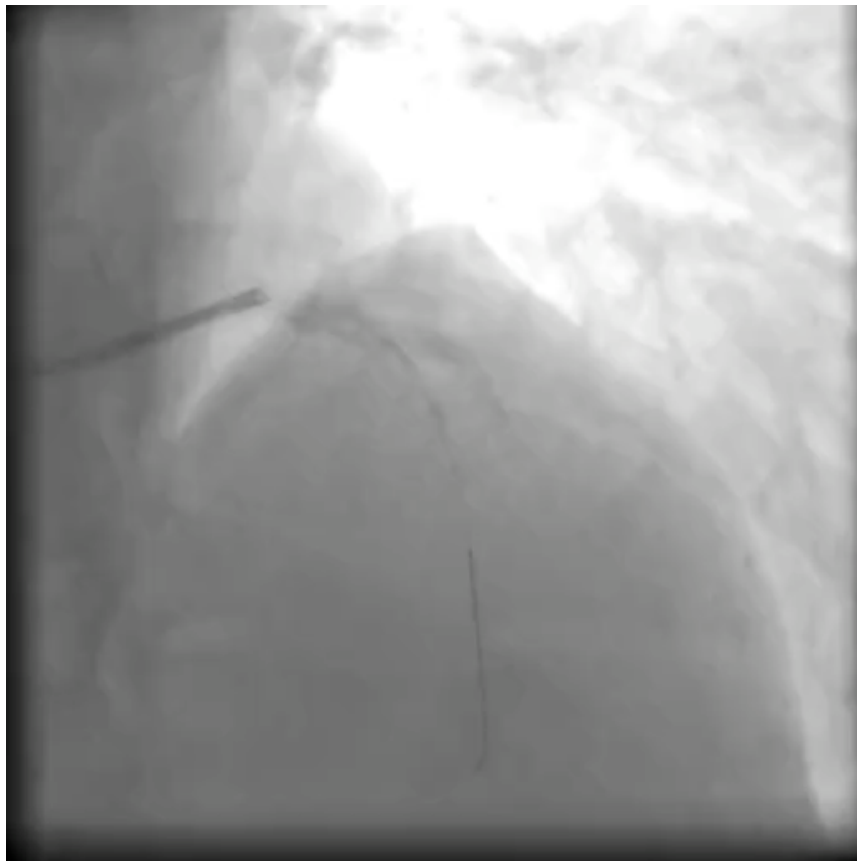

IWA ZES 3.5x22 mm

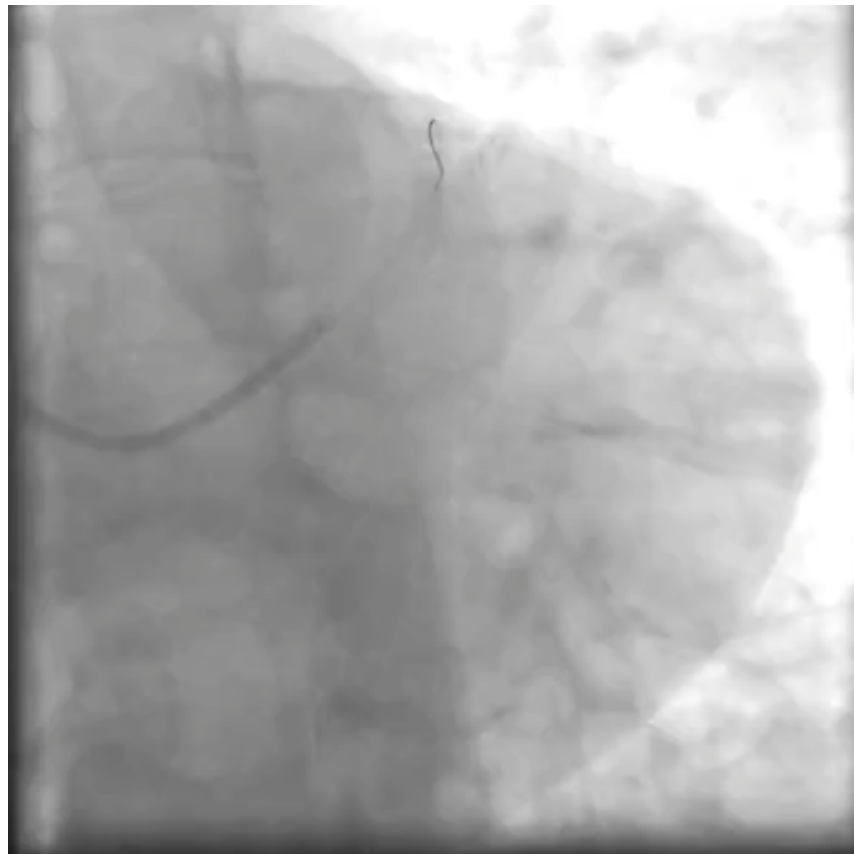

KB MB Pallone NC 3.25 mm
SB Pallone NC 2.5 mm

- Angiografia finale

- Angiografia finale

Take Home Message:

- L'importanza di avere un approccio «step by step» per ogni complicanza
- La twisting wire technique può essere utilizzata in bail-out per il recupero di una guida incarcerata in coronaria e fratturata

GRAZIE PER L'ATTENZIONE
